SL 50 Series

The SL50 Series enables the golfer with a controlled, yet relaxed swing to recapture the distance and competitive "bite" in their game. In the 50 gran range, half that of a standard graphite shaft, this series' super lightweight empowers the more methodical golfer to take back their game. It's Boron reinforced, ultra-high modulus material is the most advanced blend available provides the ultimate combination of light weight, strength and torsional stability.

Titanium Series

The Titanium Series with its integrated titanium technology is a break through shaft design. By strategically placing the proprietary titanium filament along the shaft, Harrison has created a design that reduces shaft "lag", which robs golfers of distance. This unique design reduces hooks and slices while adding distance for golfers of all levels.

Trajectory Series

The Trajectory Series offers golfers the ability to fine tune a golf ball's launch angle. Engineered to produce either a low or medium trajectory, this series can be used to produce a low and penetrating ball flight. It can also be used to generate longer distance without the use of a low lofted head that tends to produce poor ball contact.

DEMO

UL 70" Series

The father of our National Long Drive Championships winning designs, this targets the strong, ultimate distance-seeking golfer. This competition proven graphite matrix offers the highest performance distance shaft available to the 70 gram range, this series provides optimal stability enabling the golfer to unleash his power. High club head speed and a desire to shorten the course complement this series perfectly.

FL 60™ Series

This feather light weight, Boron reinforced series gives back distance and control to experienced golfers seeking to rejuvenate their game. This series' lightweight technology optimizes distance and shot dispersion by allowing for longer club length without sacrificing swing weight. Perfect for players looking to maximize club head speed, accuracy, and control.
